Khamisi Lawrence

Senior Software Engineer

Montego Bay, Jamaica | Remote (Eastern Time) | khamisilawrencejm@gmail.com
linkedin.com/in/khamisi-lawrence-webdev | github.com/khamisilawrence

SUMMARY

Software engineer with 8 years of web experience; sole engineering owner of a multi-tenant school platform taken from prototype to live pilot. Strengths: system design, application security, performance, release engineering and test-guarded AI agents.

EXPERIENCE

Lead Product Engineer, GENR8-3D | Montego Bay, Jamaica | May 2026 - Present

School Management System: multi-tenant web platform for schools, in live pilot (demo: sms-demo.solutions.genr83d.com)

- Architected a per-institution multi-tenant data model on Firebase that isolates data across 7 user roles, enforced by about 2,650 lines of Firestore security rules with automated rule tests.
- Took the platform from mock-data prototype to live pilot at 1 school, replacing paper registers and grade spreadsheets; shipped 49 feature PRs in under 6 months (gradebook, PDF report cards, online exams).
- Cut the entry bundle 88% (3.88 MB to 0.46 MB) and first-load JavaScript 75% (4.53 MB to 1.12 MB) with lazy-loaded routes, and added TanStack Query caching to reduce database reads.
- Directed Claude Code agents across 69 merged PRs with written specs and automated guard tests, owning architecture and review; grew the test suite from 3 to 345 files (Vitest, Playwright) in 10 weeks.
- Established releases with semantic versioning (now v2.45.0), a changelog and GitHub Actions release and PR checks; led technical direction with 2 developers before becoming sole owner.

Mar 2026 - Apr 2026: Freelance web development for a private client.

DevOps Engineer, TRAFFIX (contracted via BairesDev) | Remote | Feb 2025 - Feb 2026

- Rewrote, refactored and maintained the GitHub Actions CI/CD workflows shared across the team's multiple repositories.
- Built a logistics dashboard (React, TanStack Query, React Context) for tracking carriers, trucks and live loads; it became the core revenue tool for the company's U.S.-Canada cross-border freight.
- Used GitHub Copilot inline suggestions for workflow and app code, and to draft written records of developer meetings.

Back End Engineer, Majestic Arcade (contracted via GENR8-3D) | Remote | Oct 2024 - Feb 2025

- Built and maintained independently deployed Go microservices across the gaming platform's backend systems.
- Wrote the software and API documentation used to onboard new developers to the services.

Full-Stack Engineer, Red Ventures (contracted via BairesDev) | Remote | Feb 2024 - Sep 2024

- Migrated 2 large-scale address-capture web apps (Charter, USAT) from legacy code to React and Next.js, adding server-side rendering and static site generation.

Full-Stack Engineer, GENR8-3D | Montego Bay, Jamaica | Apr 2023 - Feb 2024

- Rebuilt the GENR8-3D company website as main developer in Next.js, React and Tailwind CSS, with a validated contact form.

Earlier: Frontend Web Developer, Telem (Aug 2021 - Mar 2023); Frontend Developer, GENR8 Studios (Aug 2018 - Jul 2021).

PROJECTS

School Management System Interactive Demo | sms-demo.solutions.genr83d.com

- Built a backend-free demo in 7 days with Claude Code (React, TypeScript, Vite, Cloudflare): 4 roles across 5 one-click personas, 30+ pages, fictional data wiped on sign-out, 34 Playwright specs with accessibility checks.

GENR8 Pipeline Interactive Demo | pipeline-demo.solutions.genr83d.com

- Designed a deterministic data engine generating a consistent year of operations for 7 fictional businesses and 3 roles, verified by invariant tests; shipped in 10 days (33 PRs) with Claude Code.

Geo-Info REST API | github.com/khamisilawrence/golang-geo-info-api

- Built a RESTful country-data API in Go (Echo) with Ristretto caching, per-client rate limiting, Swagger docs and Docker hosting.

SKILLS

Architecture: Multi-Tenant System Design, Role-Based Access Control, Web Performance Optimization

Languages: TypeScript, JavaScript, Go | **Testing:** Vitest, Playwright | **DevOps:** GitHub Actions, Docker

Frameworks: React, Next.js, TanStack Query, Tailwind CSS

Data/Infra: Firebase, Cloud Firestore, Vercel, Cloudflare | **AI Development Tools:** Claude Code, GitHub Copilot

EDUCATION

Programming with Google Go Specialization, University of California, Irvine (Coursera), 2024

Coursera, 5 front-end courses: Front-End Development, JavaScript, Version Control, HTML and CSS, React Basics
